Exp No: 01

Study of Low code development verses traditional application development approaches

Aim:

To Compare tradetional application development and low code application develepment based on their features, advantages and disadvantages.

Features of traditional vs low code:

Traditional Development	low code Development
* Required Programming knowledge	* Minimal Coding Required
* Developed using languages Like Java, Python, C#..etc	* Uses drag and drop interface
* Longer development time	* faster development time
* High flexibility and ~~use~~ customization	* Limited Customization
* Suitable for complex application	* Suitable for simple to medium business application

Advantages of traditional vs low code:

Tradifional Development:

* Highly Customizable
* Suitable for large and Complex Projects
* Better control over application design and Performance.
* Supports advantage integrations

Low Code Development:

* Faster application development
* Required less Coding knowledge
* Reduces development cost
* Easy maintenance and updates.

Disadvantages of traditional vs Low code:

Traditional Development:

- Time Consuming
- Requires Skilled developers
- Higher development and maintenance cost
- Longer testing and deployment process

Low code Development:

- Limited Customization option
- Vender dependency
- May not be Suitable for highly complex application.
- Licensing costs for enterprise platforms

Comparison of traditional vs low code:

Traditional Development	Low code Development
takes more time to develop application	Develops applications much faster
Requires Strong Programming Skills	Requires little or no programming knowledge
Highly flexible and Customizable	Limited Customization options.
Higher development maintenance cost	Lower development & maintance cost

Result:

Traditional development offers high flexibility and customization, while Low code development enables faster application development with minimal coding. The Suitable approach depends on the projects requirements
