EXP NO :08

Blueprint-Based Approval Process and Role-Based Access in Zoho Creator

Aim

To implement a loan approval process using a Blueprint and to control who can perform each transition.

Application Design

1 Create a Blueprint named Loan_Application_Approval_Process on the Loan Application form.

2 Define the stages: Pending, Under Review, Approved and Rejected.

3 Create the transitions Start Review, Approve Loan and Reject Loan between the stages.

4 Set Transition Owners (Everyone or Selected users) so that only authorised roles can approve or reject.

5 Set the criteria, tooltips and confirmation options for each transition, then save the Blueprint.

Output

Figure: Loan_Application_Approval_Process Blueprint with Edit Transition panel

Observation

- A loan application moves from Pending to Under Review through the Start Review transition.
- From Under Review the application can be Approved or Rejected.
- Transition owners restrict actions based on user roles, which gives role-based access control.

Validation

1 Submit an application and start the review.

2 Approve one application and reject another, then check the final status.

Result

Thus, a Blueprint-based approval process with controlled transitions was created for the loan application.
