EXP NO :11

Optimizing Application Design, Validation and Maintainability

Aim

To apply best practices that improve the quality, security and maintainability of the application.

Application Design

1 Use meaningful names for forms, fields, reports and workflows.

2 Add mandatory fields and validations to improve data quality.

3 Organise the menu into sections such as Loan Applications and Dashboard.

4 Add comments and error handling to Deluge scripts.

5 Document the changes made to the application.

Observation

- Clear naming makes the application easy to understand and maintain.
- Validations prevent wrong data from being stored.
- Well-organised menus improve the user experience.

Validation

1 Review each form and report against the best-practice checklist.

2 Test the forms with invalid data.

Result

Thus, best practices were applied to improve the design and maintainability of the application.
