## Case Study: Loan Application Management System

### Aim

To present a case study of the Loan Application Management System built using Zoho Creator.

### Observation

- Problem: loan applications were handled manually, which was slow and error-prone.
- Solution: an application with a form, reports, a dashboard, a Blueprint approval process and email workflows.
- Benefits: faster processing, fewer errors, easy tracking and better visibility of applications.
- Challenges: handling validations, role control and keeping the application simple.

### Validation

1 Review how each experiment contributes to the final application.

2 Check that the application meets the original requirements.

### Result

Thus, the case study showed how low-code development can solve a real business problem.
